

PROTECTING YOURSELF FROM A TORNADO

If a tornado WARNING sounds, you should seek shelter immediately. Normally, a tornado WATCH will be announced prior to the WARNING. If a tornado WATCH is announced, you should:

1. Monitor radio and/or television for worsening conditions and further updates
2. Tie down or move inside the storeroom, garage, or quarters, any loose items such as garbage cans, bicycles, toys, swing sets, etc. This will be flying debris in a tornado.
3. Make sure animals have shelter and your vehicle is in a garage if possible.
4. Disconnect all electrical equipment and appliances not required for emergency.
5. Check your tornado shelter area to make sure it is ready.

Where should I seek protection?

Capehart and Coffman Heights Base Housing Area

Unfortunately, many homes in base housing do not have basements and there are no designated storm shelters. If you live in a home without a basement, the safest place to seek protection would be in a closet or bathroom with no windows, or in a room near the center of your house. This helps to minimize the possibility of being next to a wall failing from direct winds, and also allows the walls to slow or stop the flying debris. Choose a small room, which tends to be stronger. If available, get under something sturdy like a desk, and cover yourself with heavy blankets or coats. Again, you're trying to protect yourself from flying debris, failing walls, and falling items. It may also be a good idea to coordinate protective areas with neighbors if their home offers better protection.

Ideally, a basement or a below-ground location offers the best protection. The winds blow only from ground-level up; therefore being below ground reduces greatly being struck by flying debris and doesn't allow the winds to cause direct building damage below ground level.

FamCamp/Base Lake

All campers should receive inclement weather guidance upon check-in. If inclement weather is predicted, the campground host will attempt to notify all campers. In the event of a tornado, the Boathouse will be opened for protection, and campers are instructed to seek protection inside the

restrooms or hallway. If stranded outside, lying face down a ditch or ravine may also provide some protection. It's recommended that you lay flat with your feet pointed toward the direction of the tornado.

Other Tornado Protective Area Guidance

If a tornado WARNING is issued, meaning a tornado has been confirmed on the ground, the best place to take shelter is normally right where you are. If you attempt to drive to a different location, you may be placing yourself at greater risk. When evaluating potential shelter locations, be sure to look UP as well. If you're sheltering in a closet, you certainly won't want to have large, heavy items on the shelves above you.

In Homes with Basements: Use the area near the wall in the strongest and deepest below ground portion of the basement.

In Homes without Basements: Take cover in the center part of the house, on the lowest floor, in a small room such as a closet or bathroom. If your home does not have a basement and a nearby neighbor does, you might consider prior arrangements to occupy their basement when the siren sounds.

Mobile Homes: Mobile homes are particularly vulnerable to overturning and destruction during strong winds, and should be abandoned in favor of a pre-selected shelter, or even a ditch in the open. Tying them with cables to cement blocks buried in the ground can minimize damage to mobile homes.

Under the stairs

Ground floor bathroom

Not the safest place to be in a tornado!

In An Open Outdoors Area: Lie flat in the nearest ditch or ravine, and point your feet toward the tornado to keep your head protected from flying debris. Be alert for flash flooding caused by thunderstorm rains. Do not seek shelter under an overpass or in your car.

In Shopping Centers, BX, Commissary, or Other Public-Type Facilities

Follow the directions given by facility personnel immediately and calmly. Do not go to your parked car. If no directions are given, go into a restroom or small windowless office.

You should remain in your protective area, monitoring the local weather on a battery radio, until it is announced that the storm has passed. Once this occurs, you can leave your shelter. If the tornado did impact your immediate area be aware of the many remaining dangers such as downed power lines, falling debris and fires.

TORNADO PROTECTIVE AREAS ON BASE

The following are common protective areas across on base. It's important to note that this is not a comprehensive list. There are designated Tornado Protective Areas in each unit and members should contact their Unit Emergency Management Program Representative for designated locations and information.

LOCATION

45RS, 55 CONS
55 CG HQ
Religious Education Center
Library
ACC Heartland Band/PA
Commissary
Security Forces Headquarters
Fire Department
Martin Bomber Building
Law Center
Defense Language Center
Hangar 4,5,6
55 MSG
Whiteman Hall (Airman Dorm)
Kisling Hall (Airman Dorm)
Turner Hall (Airman Dorm)
Tuskegee Hall (Airman Dorm)
338 CTS
Dougherty Center/Malmstrom Inn
O'Malley Inn
55 CS Maintenance Facility
Bennie L. Davis MXS Facility
55 WG/HQ
55 OSS
Veterinarian Clinic
